PROJECT ACQUISITION OPPORTUNITY

Project #2105 · 0,69 MW PV · RTB / Fully Licensed

1. EXECUTIVE SUMMARY

Project #2105 is a shovel-ready, **690 kWp** photovoltaic development held in a dedicated special purpose vehicle (SPV) and fully licensed under Cyprus's Tier 1 RTB framework. The project has cleared all regulatory hurdles — environmental, planning, and land — and requires no further permitting to proceed to construction. A preliminary grid connection application has been submitted to the Distribution System Operator; The acquisition is structured as a 100% share purchase, providing the buyer with a clean transfer of all licenses, permits, and land rights.

2. PROJECT SNAPSHOT

Technology	Photovoltaic (PV) — ground-mounted
Installed Capacity	0,69 MWp
Storage (BESS)	Not included (BESS upgrade available)
Development Stage	**Tier 1 — RTB (Ready-to-Build) / Fully Licensed**
Location	*Nicosia District*
Annual Energy Yield	*Available upon request / to be confirmed in technical DD*
Transaction Structure	*100% share purchase of SPV (transfers licences, permits, grid rights, land agreements)*
Asking Price	**EUR 276.000**

3. INVESTMENT HIGHLIGHTS

- Fully permitted with no residual regulatory risk — all licences and approvals are in place and transferable via SPV share purchase.
- Grid process advanced — preliminary connection application filed; offer expected Q3 2026, enabling construction planning to begin immediately.
- Clean corporate structure — dedicated SPV with registered land leases (Cyprus Tax Authority and Land Registry), zero encumbrances.
- Construction-ready — no further permitting required post grid offer; timeline to energisation is determined solely by EPC procurement and grid connection works.

4. DEVELOPMENT STATUS

Current status:

The project holds Tier 1 RTB status — the highest licensing classification under the Cyprus renewable energy permitting framework — with all material consents in place. Land lease agreements are formally registered and free of encumbrance.

Key open item:

Grid connection: the preliminary application to the DSO has been submitted. The formal connection offer (defining technical conditions and cost) is expected within Q3 2026. This is a process-driven milestone, not

a discretionary approval; the outcome is expected to be positive based on the project's grid proximity and capacity.

5. PRICING & STRUCTURE

Asking Price	**EUR 276,000**
Transaction Vehicle	100% share purchase of SPV
Exclusivity	Available upon execution of LOI / term sheet
Indicative Timeline	LOI → DD → SPA execution: targeted within 60–90 days

6. NEXT STEPS

1	**Execute NDA**	Site location, technical studies, and permit documentation disclosed
2	**Issue LOI / Term Sheet**	Confirms indicative price, structure, and exclusivity period
3	**Due Diligence**	Legal, technical, and financial DD on SPV (data room provided)
4	**Sign SPA & Close**	Share purchase agreement executed; SPV and all assets transferred

PROJECT ACQUISITION OPPORTUNITY

Project #2110 · 0,714 MW PV · RTB / Fully Licensed

1. EXECUTIVE SUMMARY

Project #2110 is a shovel-ready, **714 kWp** photovoltaic development held in a dedicated special purpose vehicle (SPV) and fully licensed under Cyprus's Tier 1 RTB framework. The project has cleared all regulatory hurdles — environmental, planning, and land — and requires no further permitting to proceed to construction. A preliminary grid connection application has been submitted to the Distribution System Operator; The acquisition is structured as a 100% share purchase, providing the buyer with a clean transfer of all licenses, permits, and land rights.

2. PROJECT SNAPSHOT

Technology	Photovoltaic (PV) — ground-mounted
Installed Capacity	0,714 MWp
Storage (BESS)	Not included - BESS upgrade available
Development Stage	**Tier 1 — RTB (Ready-to-Build) / Fully Licensed**
Location	*Nicosia District*
Annual Energy Yield	*Available upon request / to be confirmed in technical DD*
Transaction Structure	*100% share purchase of SPV (transfers licences, permits, grid rights, land agreements)*
Asking Price	**EUR 285.600**

3. INVESTMENT HIGHLIGHTS

- Fully permitted with no residual regulatory risk — all licences and approvals are in place and transferable via SPV share purchase.
- Grid process advanced — preliminary connection application filed; offer expected Q3 2026, enabling construction planning to begin immediately.
- Clean corporate structure — dedicated SPV with registered land leases (Cyprus Tax Authority and Land Registry), zero encumbrances.
- Construction-ready — no further permitting required post grid offer; timeline to energisation is determined solely by EPC procurement and grid connection works.

4. DEVELOPMENT STATUS

Current status:

The project holds Tier 1 RTB status — the highest licensing classification under the Cyprus renewable energy permitting framework — with all material consents in place. Land lease agreements are formally registered and free of encumbrance.

Key open item:

Grid connection: the preliminary application to the DSO has been submitted. The formal connection offer (defining technical conditions and cost) is expected within Q3 2026. This is a process-driven milestone, not

a discretionary approval; the outcome is expected to be positive based on the project's grid proximity and capacity.

5. PRICING & STRUCTURE

Asking Price	**EUR 285.600**
Transaction Vehicle	100% share purchase of SPV
Exclusivity	Available upon execution of LOI / term sheet
Indicative Timeline	LOI → DD → SPA execution: targeted within 60–90 days

6. NEXT STEPS

1	**Execute NDA**	Site location, technical studies, and permit documentation disclosed
2	**Issue LOI / Term Sheet**	Confirms indicative price, structure, and exclusivity period
3	**Due Diligence**	Legal, technical, and financial DD on SPV (data room provided)
4	**Sign SPA & Close**	Share purchase agreement executed; SPV and all assets transferred

Neither the seller nor its advisors accept liability for reliance on this document without independent verification.

PROJECT ACQUISITION OPPORTUNITY

Combined Package: Projects #2205 & #2206 · 2.817 MW · PV + BESS · Land-Owned

1. EXECUTIVE SUMMARY

This offering comprises two complementary solar PV projects — #2205 and #2206 — held in dedicated SPVs and presented exclusively as a combined package. The projects share a critical structural advantage: the land is company-owned in both cases, eliminating lease risk entirely and enhancing long-term asset security.

Project #2205 (0,5 MWp PV) is physically constructed and awaiting grid connection — the most advanced pre-operational stage. Project #2206 (2,317 MWp PV + 2,2 MW / 0,75 MWh BESS) holds Tier 1 RTB status with all licenses, offering a ready pipeline asset with storage capability. Together, the package delivers 2,817 MW of licensed, land-owned solar capacity at a single blended acquisition price of **EUR 1.850.000**.

2. PROJECT SNAPSHOT

Project #2205 — 0,5 MWp PV | Construction Complete

Technology	Photovoltaic (PV) — ground-mounted
Installed Capacity	0,5 MWp
BESS	Not included
Development Stage	**Tier 1 — Construction Complete**
Land Ownership	**Company-owned — land acquisition cost: EUR 65.000**
Construction Cost Incurred	EUR 200,000 (works completed — included for buyer's reference)

Project #2206 — 2.317 MWp PV + BESS | RTB / Fully Licensed

Technology	Photovoltaic (PV) + Battery Energy Storage System (BESS)
Installed Capacity (PV)	2,317 MWp
BESS Specification	2,2 MW / 0,75 MWh
Development Stage	**Tier 1 — RTB (Ready-to-Build) / Fully Licensed**
Land Ownership	**Company-owned — land acquisition cost: EUR 340.000**
Construction Cost Incurred	EUR 119.000 (Topographic Survey & Boundary Setting, Earthworks & Site Preparation and Fencing Construction have been completed)

3. INVESTMENT HIGHLIGHTS

- Company-owned land on both projects eliminates lease risk — a material differentiator in a market where land agreements are the most common source of development friction and cost.
- Capital already deployed on #2205 — construction is physically complete; the buyer acquires a built asset requiring only grid connection to become operational, bypassing EPC risk entirely.
- BESS-enabled pipeline on #2206 — the 2,2 MW / 0,75 MWh storage component positions the project for enhanced revenue stacking (capacity market, balancing, arbitrage)
- Combined scale at a single blended price — 2.817 MW in one transaction reduces per-project overhead and provides immediate portfolio diversification across two development stages.

– Clean SPV structure — two dedicated companies with full regulatory, land, and license documentation; designed for efficient share purchase transfer.

4. DEVELOPMENT STATUS

Project #2205 — Construction Complete:

All construction work has been completed. The project is awaiting grid connection. This is the final pre-operational milestone; no further construction or permitting is required. Land is freehold. Risk profile is minimal — the primary remaining step is an administrative/technical one with the DSO.

Project #2206 — RTB / Fully Licensed:

Holds Tier 1 RTB status with all material consents in place. Land is freehold, eliminating the most common source of late-stage development risk. The project is awaiting grid connection .

Package structure:

The two projects are offered exclusively as a combined package. Site locations will be disclosed following NDA execution. Full technical documentation, permit files, and land title records are available in a structured data room.

5. PRICING & STRUCTURE

Package Asking Price	**EUR 1.850.000**
Land acquisition (#2205 + #2206)	EUR 405.000
Permitting & licensing costs	EUR 1.126.000
Constructed Works (#2205)	EUR 200.000 (buyer acquires completed civil & electrical works)
Constructed Works (#2206)	EUR 119.000 (buyer acquires Boundary Setting, Earthworks & Site Preparation and Fencing Construction)
Transaction Vehicle	100% share purchase of both SPVs (simultaneous closing)
Package Condition	**Sold as a combined package**

6. NEXT STEPS

1	**Execute NDA**	Site locations, land titles, permits, and technical studies disclosed
2	**Issue LOI / Term Sheet**	Confirms package price, structure, and exclusivity period
3	**Due Diligence**	Legal, technical & financial DD on both SPVs via structured data room
4	**Sign SPA & Simultaneous Close**	Both SPVs transferred in a single coordinated closing

This document is strictly private and confidential. It is non-binding and intended solely for the named recipient. All information is provided in good faith and subject to confirmation due diligence. Neither the seller nor its advisors accept liability for reliance on this document without independent verification.

PROJECT ACQUISITION OPPORTUNITY

Project #2302 · 0,714 MW PV · RTB / Fully Licensed

1. EXECUTIVE SUMMARY

Project #2302 is a shovel-ready, **825 kWp** photovoltaic development held in a dedicated special purpose vehicle (SPV) and fully licensed under Cyprus's Tier 1 RTB framework. The project has cleared all regulatory hurdles — environmental, planning, and land — and requires no further permitting to proceed to construction. A preliminary grid connection application has been submitted to the Distribution System Operator; The acquisition is structured as a 100% share purchase, providing the buyer with a clean transfer of all licenses, permits, and land rights.

2. PROJECT SNAPSHOT

Technology	Photovoltaic (PV) — ground-mounted
Installed Capacity	0,825 MWp
Storage (BESS)	Not included (BESS upgrade available)
Development Stage	**Tier 1 — RTB (Ready-to-Build) / Fully Licensed**
Location	*Nicosia District*
Annual Energy Yield	*Available upon request / to be confirmed in technical DD*
Transaction Structure	*100% share purchase of SPV (transfers licences, permits, grid rights, land agreements)*
Asking Price	**EUR 330.000**

3. INVESTMENT HIGHLIGHTS

– Fully permitted with no residual regulatory risk — all licenses and approvals are in place and transferable via SPV share purchase.

– Grid process advanced — preliminary connection application filed; offer expected Q3 2026, enabling construction planning to begin immediately.

– Clean corporate structure — dedicated SPV with registered land leases (Cyprus Tax Authority and Land Registry), zero encumbrances.

– Construction-ready — no further permitting required post grid offer; timeline to energisation is determined solely by EPC procurement and grid connection works.

4. DEVELOPMENT STATUS

Current status:

The project holds Tier 1 RTB status — the highest licensing classification under the Cyprus renewable energy permitting framework — with all material consents in place. Land lease agreements are formally registered and free of encumbrance.

Key open item:

Grid connection: the preliminary application to the DSO has been submitted. The formal connection offer (defining technical conditions and cost) is expected within Q3 2026. This is a process-driven milestone, not

a discretionary approval; the outcome is expected to be positive based on the project's grid proximity and capacity.

5. PRICING & STRUCTURE

Asking Price	**EUR 330.000**
Transaction Vehicle	100% share purchase of SPV
Exclusivity	Available upon execution of LOI / term sheet
Indicative Timeline	LOI → DD → SPA execution: targeted within 60–90 days

6. NEXT STEPS

1	**Execute NDA**	Site location, technical studies, and permit documentation disclosed
2	**Issue LOI / Term Sheet**	Confirms indicative price, structure, and exclusivity period
3	**Due Diligence**	Legal, technical, and financial DD on SPV (data room provided)
4	**Sign SPA & Close**	Share purchase agreement executed; SPV and all assets transferred

Neither the seller nor its advisors accept liability for reliance on this document without independent verification.

PROJECT ACQUISITION OPPORTUNITY

Project #2402 · 0.950 MW Agrivoltaic + BESS · Tier 2 Late Stage · RTB Q4 2026

1. EXECUTIVE SUMMARY

Project #2402 is a late-stage Agrivoltaic development combining 0.950 MWp of solar PV generation with a co-located 0.95 MW / 1.9 MWh battery energy storage system (BESS). At Tier 2 status with development completion estimated at 70–85%, the project is on track for Ready-to-Build (RTB) milestone by Q4 2026. A preliminary grid connection application has been submitted to the Distribution System Operator.

The Agrivoltaic configuration — integrating solar production with active agricultural use of the underlying land — reflects the dual-purpose licensing framework and positions the project within Cyprus's growing Agrivoltaic pipeline, a segment attracting increasing institutional attention. The BESS component (1.9 MWh capacity) provides meaningful optionality for revenue optimization beyond simple energy generation.

The project is offered via 100% SPV share purchase at EUR 380,000, representing a straightforward entry into a near-RTB, technology-diversified asset.

2. PROJECT SNAPSHOT

Technology	Agrivoltaic (dual-use: solar PV + active agricultural land use)
Installed Capacity (PV)	0.950 MWp
BESS Specification	**0.95 MW / 1.9 MWh**
Development Stage	**Tier 2 — Late Stage (70–85% complete)**
RTB Target	**Q4 2026**
Grid Connection	Preliminary application submitted to DSO
Land Rights	The plot and the licenses belongs to the same person
Location	*District of Nicosia*
Transaction Structure	CERA license is currently held by the individual developer and is transferable upon regulatory approval
Asking Price	**EUR 380,000**

3. INVESTMENT HIGHLIGHTS

- Agrivoltaic configuration — dual-purpose land use (solar + agriculture) aligns with EU sustainability frameworks and expands the eligible investor and offtake universe relative to standard PV.
- Integrated BESS at 2:1 energy-to-power ratio (1.9 MWh / 0.95 MW) — purpose-sized for intraday arbitrage, peak-shifting, and ancillary services, enhancing revenue optionality from day one of operations.
- Late-stage development at 70–85% completion — the buyer acquires a project within sight of RTB with a defined Q4 2026 target.
- Grid process initiated — preliminary application submitted; the connection offer is the next process-driven milestone

4. DEVELOPMENT STATUS

Current status:

The project has achieved Tier 2 classification and is assessed at 70–85% development completion. The remaining work programme to RTB is defined and on track for Q4 2026. The Agrivoltaic licensing framework requires coordination across energy and agricultural regulatory tracks; both are in progress.

Grid connection:

A preliminary connection application has been submitted to the DSO. The formal offer (defining technical conditions and indicative cost) is the next milestone. No discretionary obstacles are anticipated based on project location and capacity.

5. PRICING & STRUCTURE

Asking Price	**EUR 380,000**
Transaction Vehicle	100% share purchase of SPV
Exclusivity	Available upon execution of LOI / term sheet
Indicative Timeline	LOI → DD → SPA execution: targeted within 60–90 days

6. NEXT STEPS

1	**Execute NDA**	Site location, permit status, land classification, and DD materials disclosed
2	**Issue LOI / Term Sheet**	Confirms price, structure, and exclusivity period through RTB
3	**Due Diligence**	Legal, technical & regulatory DD via structured data room
4	**Sign SPA & Close**	SPV transferred; milestone provisions tied to RTB if applicable

This document is strictly private and confidential. It is non-binding and intended solely for the named recipient. All information is provided in good faith and subject to confirmation due diligence. PROJECT ACQUISITION OPPORTUNITY

Project #2501 · 0,95 MW + BESS · Tier 2 Late Stage · RTB Q4 2026

1. EXECUTIVE SUMMARY

Project #2501 is a late-stage PV development combining 0,95 MWp of solar PV generation with a co-located 0,4 MW / 2 MWh battery energy storage system (BESS). At Tier 2 status with development completion estimated at 70–85%, the project is on track for Ready-to-Build (RTB) milestone by Q4 2026. A preliminary grid connection application has been submitted to the Distribution System Operator.

The Agrivoltaic configuration — integrating solar production with active agricultural use of the underlying land — reflects the dual-purpose licensing framework and positions the project within Cyprus's growing Agrivoltaic pipeline, a segment attracting increasing institutional attention. The BESS component (1.9 MWh capacity) provides meaningful optionality for revenue optimization beyond simple energy generation.

The project is offered via 100% SPV share purchase at EUR 380.000, representing a straightforward entry into a near-RTB, technology-diversified asset.

2. PROJECT SNAPSHOT

Technology	Photovoltaic (PV) — ground-mounted
Installed Capacity (PV)	0.950 MWp
BESS Specification	**0,4 MW / 2 MWh**
Development Stage	**Tier 2 — Late Stage (70–85% complete)**
RTB Target	**Q4 2026**
Location	*District of Nicosia*
Transaction Structure	*100% share purchase of SPV (transfers licences, permits, grid rights, land agreements)*
Asking Price	**EUR 380,000**

3. INVESTMENT HIGHLIGHTS

- Integrated BESS at 5:1 energy-to-power ratio (0,4 MWh / 2 MW) — purpose-sized for intraday arbitrage, peak-shifting, and ancillary services, enhancing revenue optionality from day one of operations.
- Late-stage development at 70–85% completion — the buyer acquires a project within sight of RTB with a defined Q4 2026 target.
- Grid process initiated — preliminary application submitted; the connection offer is the next process-driven milestone

4. DEVELOPMENT STATUS

Current status:

The project has achieved Tier 2 classification and is assessed at 70–85% development completion. The remaining work programme to RTB is defined and on track for Q4 2026. The Agrivoltaic licensing framework requires coordination across energy and agricultural regulatory tracks; both are in progress.

Grid connection:
A preliminary connection application has been submitted to the DSO. The formal offer (defining technical conditions and indicative cost) is the next milestone. No discretionary obstacles are anticipated based on project location and capacity.

5. PRICING & STRUCTURE

Asking Price	**EUR 380,000**
Transaction Vehicle	100% share purchase of SPV
Exclusivity	Available upon execution of LOI / term sheet
Indicative Timeline	LOI → DD → SPA execution: targeted within 60–90 days

6. NEXT STEPS

1	**Execute NDA**	Site location, permit status, land classification, and DD materials disclosed
2	**Issue LOI / Term Sheet**	Confirms price, structure, and exclusivity period through RTB
3	**Due Diligence**	Legal, technical & regulatory DD via structured data room
4	**Sign SPA & Close**	SPV transferred; milestone provisions tied to RTB if applicable

This document is strictly private and confidential. It is non-binding and intended solely for the named recipient. All information is provided in good faith and subject to confirmation due diligence. Neither the seller nor its advisors accept liability for reliance on this document without independent verification.

PROJECT ACQUISITION OPPORTUNITY

Project #2502 · 2,765 MW + BESS · Tier 3 Mid Stage · RTB Q1 2027

1. EXECUTIVE SUMMARY

Project **#2502** is a mid-stage PV development combining 2,765 MWp of solar PV generation with a co-located 1,2 MW / 2,4 MWh battery energy storage system (BESS). At Tier 3 status with development completion estimated at 70–85%, the project is on track for Ready-to-Build (RTB) milestone by Q1 2027. A preliminary grid connection application has been submitted to the Distribution System Operator.

The Agrivoltaic configuration — integrating solar production with active agricultural use of the underlying land — reflects the dual-purpose licensing framework and positions the project within Cyprus's growing Agrivoltaic pipeline, a segment attracting increasing institutional attention. The BESS component (2 MWh capacity) provides meaningful optionality for revenue optimization beyond simple energy generation.

The project is offered via 100% SPV share purchase at EUR 1.106.000, representing a straightforward entry into a near-RTB, technology-diversified asset.

2. PROJECT SNAPSHOT

Technology	Photovoltaic (PV) — ground-mounted
Installed Capacity (PV)	2,765 MWp
BESS Specification	**0,4 MW / 2 MWh**
Development Stage	**Tier 3 — Mid Stage (~40–60%)**
RTB Target	**Q1 2027**
Location	*District of Nicosia*
Transaction Structure	*100% share purchase of SPV (transfers licences, permits, grid rights, land agreements)*
Asking Price	**EUR 1.106.000**

3. INVESTMENT HIGHLIGHTS

- Integrated BESS at 2:1 energy-to-power ratio (1,2 MW / 2,4 MWh) — purpose-sized for intraday arbitrage, peak-shifting, and ancillary services, enhancing revenue optionality from day one of operations.
- Mide-stage development at 40–65% completion — the buyer acquires a project within sight of RTB with a defined Q1 2027 target.
- Grid process initiated — preliminary application will be submitted; the connection offer is the next process-driven milestone

4. DEVELOPMENT STATUS

Current status:

The project has achieved Tier 3 classification and is assessed at 40–65% development completion. The remaining work programme to RTB is defined and on track for Q1 2027. The Agrivoltaic licensing framework requires coordination across energy and agricultural regulatory tracks; both are in progress.

Grid connection:
A preliminary connection application has been submitted to the DSO. The formal offer (defining technical conditions and indicative cost) is the next milestone. No discretionary obstacles are anticipated based on project location and capacity.

5. PRICING & STRUCTURE

Asking Price	**EUR 1.106.000**
Transaction Vehicle	100% share purchase of SPV
Exclusivity	Available upon execution of LOI / term sheet
Indicative Timeline	LOI → DD → SPA execution: targeted within 60–90 days

6. NEXT STEPS

1	**Execute NDA**	Site location, permit status, land classification, and DD materials disclosed
2	**Issue LOI / Term Sheet**	Confirms price, structure, and exclusivity period through RTB
3	**Due Diligence**	Legal, technical & regulatory DD via structured data room
4	**Sign SPA & Close**	SPV transferred; milestone provisions tied to RTB if applicable
