Margí — 5.0 MWp under one licence: 3.3 MWp operating plus 1.7 MWp captive RTB

OPERATIONAL SINCE JULY 2025 | FOR SALE — €1.7M | CERA E004836/2025 | 5.0 MWP COMBINED | 13.2 MWH RETROFIT | NICOSIA DISTRICT

One CERA licence, one acquisition, two offtake modes. The 3.3 MWp park at Margí has been exporting since July 2025 and is already being curtailed; the adjoining 1.7 MWp plot is licensed and building-permitted but has no EAC connection, so it is a behind-the-meter captive plant, not a second merchant export. The asking price of **€1.7 million covers both**. What a buyer then funds is the 13.2 MWh retrofit on the operating park and the turnkey build of the 1.7 MWp expansion. Together that is 5.0 MWp — the envelope in M2's brief.

5.0 MWp	3.3 / 13.2	€4.83m	€1.08m	22.4%
3.3 built + 1.7 RTB captive	MW / MWh on the operating park	All-in, incl. €1.7m acquisition	Year 1 EBITDA at €100/MWh captive	Year 1 yield on cost

What is being bought

Location	Margí, Nicosia District, Cyprus
Licence	CERA E004836/2025, covering 3.3 MWp operating and 1.7 MWp expansion
Operating park	3.3 MWp, grid connected since July 2025. Trina 620 Wp bifacial, Huawei inverters, fixed tilt. Metered yield 2,100 kWh/kWp · yr — 6,930 MWh. Site curtailment 47–50% in 2025
Expansion plot	1.7 MWp, CERA licence and building permit held. No EAC connection terms, none applied for. 2,500 × 680 Wp bifacial, south 31°. Yield 2,194 kWh/kWp — 3,730 MWh behind the meter
Intended use, 1.7 MWp	Captive load — data centre, industrial tenant, or mining. No export, so no curtailment
EPC and O&M	Lighthief Cyprus Ltd (built and operates the 3.3 MWp)

All-in cost to a buyer, ex VAT	€
Acquisition — operating 3.3 MWp and 1.7 MWp RTB	1,700,000
BESS EPC — 13.2 MWh at €127k/MWh on the 3.3	1,676,400
PV EPC — 1.7 MWp at €0.72/Wp	1,224,000
Development, permits, contingency on the 1.7	225,400
Total investment	**4,825,800**
Optional 6.8 MWh battery on the captive plot	863,600
Year 1 EBITDA, combined, at €100/MWh captive	1,079,300
Year 1 yield on cost	22.4%
Simple payback, unlevered	4.5 years

Land is leased. No EAC connection charge is incurred on the 1.7 MWp because no connection is made. The optional battery is for night-time captive cover and is not in the €4.83m headline.

Year one, combined, at the 2026 curtailment rate

Source	MWh/yr	€/MWh	Year 1
3.3 MWp — solar exported directly (35%)	2,426	127	€308,000
3.3 MWp — recovered by battery and sold at night	3,836	175	€671,400
1.7 MWp — captive supply, highlighted case	3,730	100	€373,000
Gross energy revenue	**9,992**		**€1,352,400**
Aggregator and offtake fee, 10% on merchant only			(€97,900)
Operating cost — PV 3.3 €88,000, battery €41,800, PV 1.7 €45,300			(€175,100)
Year 1 EBITDA, whole asset, unlevered			**€1,079,300**

Merchant lines use the operating park's metered 2,100 kWh/kWp. The captive line uses the Sotira south-facing PVGIS + bifacial figure of 2,194 kWh/kWp. The 10% aggregator fee applies only to day-ahead sales; the captive tariff is a bilateral price.

The captive tariff is the open variable. The merchant side is not.

Captive tariff on the 1.7 MWp	Captive EBITDA	Combined Year 1 EBITDA	Yield on €4.83m	Payback
€70/MWh	€215,800	€967,400	20.0%	5.0 yr
€80/MWh	€253,100	€1,004,700	20.8%	4.8 yr
€100/MWh — highlighted case	**€327,700**	**€1,079,300**	**22.4%**	**4.5 yr**
€120/MWh	€402,300	€1,153,900	23.9%	4.2 yr

Combined EBITDA = €751,600 from the operating park and battery (independent of the captive tariff) plus captive EBITDA. A €80–120/MWh band is where we would expect an industrial negotiation to land against EAC retail and a day-ahead average of €158/MWh. No tenant is under contract. Until one is, treat the captive increment as an option on the same licence, not as contracted cash flow.

> **What has to be true on the 1.7 MWp.** There is no counterparty under contract and no connection application lodged. Cyprus has a thin market for the kind of captive tenant this needs. The 3.3 MWp and the battery retrofit do not depend on that tenant — they stand on metered generation and the day-ahead market. Our recommendation is that M2 underwrite the operating park on its own numbers and treat the expansion as upside that is already paid for inside the €1.7m, rather than as a reason to pay more.

Basis. Wholesale prices from published TSOC day-ahead market files, 1 Oct 2025 – 11 Feb 2026 (134 trading days, 6,432 half-hourly prints): daytime average €127/MWh, evening peak (17:00–21:00) average €183/MWh. This pack takes €175/MWh for evening capture, €8/MWh below the measured average. Curtailment base case of 65% is the published national rate for January–May 2026 (162 GWh curtailed); 2025 full year was 47.4% (306 GWh, CyprusGrid). South-facing new-build yield is 2,194 kWh/kWp · yr (PVGIS 5.3 south 31° front 2,006 at the Sotira TMY, plus +9.3% bifacial at albedo 0.25, GCR 0.45, φ 0.85, 680 Wp n-type). Margí operating uses metered 2,100. Sotira east–west is 1,806. PVsyst before commitment. Battery round-trip efficiency 87.8% AC–AC; effective capture of curtailed energy 85%, being daily-shape collection multiplied by round-trip efficiency. EPC rates €0.72/Wp (PV, turnkey) and €127,000/MWh (BESS, ex VAT) per the Lighthief EPC workbook v4, February 2026, and are indicative pending final specification and equipment pricing at the date of order. Ready-to-build site cost is €350,000/MW where an acquisition is required. Revenues are stated after a 10% aggregator and offtake fee on merchant energy and before Cyprus corporate income tax, which rose from 12.5% to 15% on 1 January 2026. Figures are unlevered and exclude VAT. Merchant exposure to a day-ahead market with under two years of published price history is the single largest uncertainty in this case; no merchant revenue is contracted.
