Agios Theodoros — 2.64 MWp ready to build, with a 10.56 MWh four-hour battery

READY TO BUILD

CERA E004576/2024

2.64 MWp

10.56 MWh · FOUR-HOUR

LARNACA DISTRICT

SPV SHARE TRANSFER

A permitted 2.64 MWp ground-mounted park at Agios Theodoros in the Larnaca District, held in a dedicated project company and offered as a share transfer, with a 10.56 MWh four-hour battery built alongside it under a turnkey Lighthief EPC contract. This is the base-case block of Document 1 multiplied by 2.64, on the same land, under one grid connection. It is the closest fit in our Cyprus pipeline to M2's ready-to-build mandate.

2.64 MWp Fixed tilt 25°, bifacial	2.64 / 10.56 MW / MWh LFP battery	€4.59m All-in, incl. acquisition	€600,000 Year 1 EBITDA, unlevered	13.1% Year 1 yield on cost
---	---	--	---	--------------------------------------

The asset

Location	Agios Theodoros, Larnaca District, Cyprus	All-in cost to a buyer, ex VAT	€
Generation licence	CERA E004576/2024, 2.64 MWp	Acquisition of the project company	1,000,000
Site	30,101 m ² on a 35-year private land lease dated 5 September 2022, at €300 per 1,000 m ² per year — €9,030 a year	PV EPC — 2.64 MWp at €0.72/Wp	1,900,800
Modules	3,882 × 680 Wp bifacial TopCon (2.64 MWp)	BESS EPC — 10.56 MWh at €127k/MWh	1,341,100
Mounting	Fixed tilt 25° south, white albedo, bifacial gain +11%	Development, grid, permits, contingency	350,000
Grid	EAC connection secured with the project	Total investment	4,591,900
Route to market	Merchant, day-ahead market, through an independent supplier. No fixed tariff.	Year 1 EBITDA, unlevered	600,000
Ownership	Held in a dedicated project company; transaction structured as a transfer of 100% of the shares	Year 1 yield on cost	13.1%
Delivery	Turnkey EPC and long-term O&M by Lighthief Cyprus	Simple payback, unlevered	7.7 years

Indicative senior debt of 70% against the €3.24m EPC cost, 15 years at 5% nominal, is available; the levered case is in the Excel model. Figures here are unlevered.

Year one revenue, at the 2026 curtailment rate

Source	MWh/yr	€/MWh	Year 1	Basis
Gross generation at 2,150 kWh/kWp	5,676	—	—	PVsyst to confirm on final layout
Solar exported directly (35%)	1,987	127	€252,300	Day-ahead daytime average
Recovered by battery and sold at night	3,142	175	€549,900	Evening peak 17:00–21:00
Curtailed and not recovered	547	—	—	Battery full or unavailable
Gross energy revenue	5,129	156	€802,200	
Aggregator and offtake fee, 10%			(€80,200)	
Operating cost — O&M, insurance, land lease			(€122,000)	Escalates in the model
Year 1 EBITDA, unlevered, pre-tax			€600,000	

Sensitivity

Curtailment	Exported	Battery delivered	Gross revenue	Year 1 EBITDA	Yield on cost	Payback
35%	3,689 MWh	1,692 MWh	€764,600	€566,200	12.3%	8.1 yr
50% — 2025 national actual 47.4%	2,838 MWh	2,417 MWh	€783,400	€583,100	12.7%	7.9 yr
65% — 2026 national actual, base case	1,987 MWh	3,142 MWh	€802,200	€600,000	13.1%	7.7 yr

A three-percentage-point spread in yield across a thirty-point swing in curtailment. The four-hour battery is what makes that true.

Two items for confirmatory diligence, which we would rather raise now than have you find. First, permitting: the CERA licence is in place and the project has been presented as ready to build, but the planning and environmental consents were last confirmed to us in early 2026 and we are re-verifying their current status with the consultant before signature; we will not warrant ready-to-build status until that is back in writing. Second, land classification: the site is agricultural and was originally conceived as an agrivoltaic park. Law 114(I)/2026 restricts commercial renewables on agricultural and protected land, and we are confirming that the project’s grandfathering under its 2024 licence and 2022 lease is unaffected. Both points are in the data room and both are conditions we expect to close before an SPA rather than after.

Basis. Wholesale prices from published TSOC day-ahead market files, 1 Oct 2025 – 11 Feb 2026 (134 trading days, 6,432 half-hourly prints): daytime average €127/MWh, evening peak (17:00–21:00) average €183/MWh. This pack takes €175/MWh for evening capture, €8/MWh below the measured average. Curtailment base case of 65% is the published national rate for January–May 2026 (162 GWh curtailed); 2025 full year was 47.4% (306 GWh, CyprusGrid). Specific yield of 2,150 kWh/kWp · yr is the Lighthief design figure for fixed tilt 25° south with bifacial modules and white albedo; site-specific yield is confirmed by PVsyst before any commitment. Battery round-trip efficiency 87.8% AC–AC; effective capture of curtailed energy 85%, being daily-shape collection multiplied by round-trip efficiency. EPC rates €0.72/Wp (PV, turnkey) and €127,000/MWh (BESS, ex VAT) per the Lighthief EPC workbook v4, February 2026, and are indicative pending final specification and equipment pricing at the date of order. Revenues are stated after a 10% aggregator and offtake fee and before Cyprus corporate income tax, which rose from 12.5% to 15% on 1 January 2026. Figures are unlevered and exclude VAT. Merchant exposure to a day-ahead market with under two years of published price history is the single largest uncertainty in this case; no revenue is contracted.

Disclaimer. This document is confidential and is provided for information only under NDA LCY-NDA-M2V-2026-001. It is not an offer to sell, a solicitation to buy any security or interest, or investment advice. All figures are indicative and subject to confirmatory due diligence, final specification and site conditions. Actual results will differ. Recipients should form their own view and take their own tax, legal and technical advice. Binding figures are the downloadable Excel model available in the data room.
