Margí expansion — 1.7 MWp permitted, for captive supply behind the meter

CERA LICENCE AND BUILDING PERMIT HELD

NO EAC CONNECTION TERMS

1.7 MWp

BEHIND THE METER

NICOSIA DISTRICT

A 1.7 MWp licensed plot adjoining the operating park at Margí, carrying a CERA permit and a building permit but **no grid connection terms**. We are showing it to M2 because the absence of a connection is, in the Cyprus of 2026, close to an advantage: a plant that never touches the transmission system cannot be curtailed, and curtailment is the single largest value leak on the island. It is a captive-supply asset for a data centre, an industrial anchor tenant or a mining load, not a merchant export asset.

1.7 MWp Licensed, permit in hand	3,230 MWh Available behind the meter, per year	€1.45m Turnkey build cost, ex VAT	0% Exposure to grid curtailment
--	--	---	---

Why this is on the list, and why it is fourth

M2's inquiry asks for secured grid approval or advanced status with EAC. This plot does not have it and we are not going to present it as though it does. What it has instead is a licence, a building permit, land adjoining an operating asset we built and maintain, and an economic case that does not require a grid connection at all. It belongs in this pack as an option to be taken or declined on its own terms, and it is the piece that takes a portfolio built around Agios Theodoros from 2.64 MWp to 4.34 MWp without breaching the 5 MWp ceiling.

Location	Margí, Nicosia District — adjoining the operating 3.3 MWp park	Turnkey build cost, ex VAT	€
Consents held	CERA licence E004836/2025 and building permit	PV EPC — 1.7 MWp at €0.72/Wp	1,224,000
Consents not held	EAC connection terms. None applied for.	Development, permits, contingency	225,400
Annual energy	Approximately 3,230 MWh available behind the meter	Total, PV only	1,449,400
Intended use	Captive load — data centre, industrial anchor tenant, or mining. No export.	Optional 6.8 MWh battery	863,600
Curtailment exposure	None. The plant is not dispatched by the system operator.	Operating cost, PV only	45,300 / yr
Optional storage	6.8 MWh four-hour battery for night-time cover, €863,600 ex VAT	Land is leased. No grid connection charge is incurred because no connection is made, which removes both the EAC connection fee and the queue.	
Delivery	Turnkey EPC and long-term O&M by Lighthief Cyprus		

The return is a function of one number: what the tenant pays

Captive supply tariff	Year 1 revenue	Operating cost	Year 1 EBITDA	Yield on cost	Payback
€70/MWh	€226,100	(€45,300)	€180,800	12.5%	8.0 yr
€80/MWh	€258,400	(€45,300)	€213,100	14.7%	6.8 yr
€100/MWh	€323,000	(€45,300)	€277,700	19.2%	5.2 yr
€120/MWh	€387,600	(€45,300)	€342,300	23.6%	4.2 yr

For orientation, the day-ahead market averaged €158/MWh across all hours in the sample period and EAC's retail tariff is materially above that, so a captive tariff in the €80–120/MWh band is where we would expect a negotiation with an industrial counterparty to land. We have not signed one. Until an offtaker is under contract this is an assumption and nothing more, and it is the whole of the investment case for this plot — which is why we would not recommend acquiring it ahead of a tenant.

What has to be true. There is no counterparty under contract for this plot today and no connection application lodged. The case rests entirely on securing a captive load, and Cyprus has a thin market for the kind of tenant this needs. Our recommendation is that M2 treat this as an option alongside Agios Theodoros rather than a standalone acquisition, and that any price paid reflects development-stage risk rather than permitted-asset value. If M2 has a view on data centre or industrial demand in Cyprus, that view is worth more to this asset than anything on this page.

Basis. Wholesale prices from published TSOC day-ahead market files, 1 Oct 2025 – 11 Feb 2026 (134 trading days, 6,432 half-hourly prints): daytime average €127/MWh, evening peak (17:00–21:00) average €183/MWh. This pack takes €175/MWh for evening capture, €8/MWh below the measured average. Curtailment base case of 65% is the published national rate for January–May 2026 (162 GWh curtailed); 2025 full year was 47.4% (306 GWh, CyprusGrid). Specific yield of 2,150 kWh/kWp · yr is the Lighthief design figure for fixed tilt 25° south with bifacial modules and white albedo; site-specific yield is confirmed by PVsyst before any commitment. Battery round-trip efficiency 87.8% AC–AC; effective capture of curtailed energy 85%, being daily-shape collection multiplied by round-trip efficiency. EPC rates €0.72/Wp (PV, turnkey) and €127,000/MWh (BESS, ex VAT) per the Lighthief EPC workbook v4, February 2026, and are indicative pending final specification and equipment pricing at the date of order. Revenues are stated after a 10% aggregator and offtake fee and before Cyprus corporate income tax, which rose from 12.5% to 15% on 1 January 2026. Figures are unlevered and exclude VAT. Merchant exposure to a day-ahead market with under two years of published price history is the single largest uncertainty in this case; no revenue is contracted.
