Margí — 3.3 MWp operating and for sale, with a 13.2 MWh battery retrofit

OPERATIONAL SINCE JULY 2025	GRID CONNECTED	FOR SALE	CERA E004836/2025	3.3 MWp	13.2 MWh RETROFIT
NICOSIA DISTRICT					

A 3.3 MWp park at Margí in the Nicosia District, built by Lighthief Cyprus and exporting since July 2025, offered for sale with a 13.2 MWh four-hour battery retrofit. The park is already generating and already being curtailed, which means the storage case here is not a forecast: the curtailed volume is metered. For an investor who wants Cypriot cash flow this quarter rather than after a construction programme, this is the asset in our pipeline that delivers it.

3.3 MWp Built, exporting since Jul 2025	3.3 / 13.2 MW / MWh battery retrofit	€1.68m Battery capex, ex VAT	€562,400 Year 1 EBITDA from the battery alone	33.5% Year 1 yield on battery capex
---	--	--	---	---

The asset

Location	Margí, Nicosia District, Cyprus	Battery retrofit, standalone economics	€
Licence	CERA E004836/2025, covering the operating park and a further 1.7 MWp	13.2 MWh LFP at €127k/MWh, turnkey ex VAT	1,676,400
Status	Grid connected and exporting since July 2025	Energy recovered and sold in the evening	3,836 MWh
Modules	Trina NEG19RC.20, 620 Wp bifacial	Revenue at €175/MWh	671,400
Inverters	Huawei SUN2000 series	Aggregator and offtake fee, 10%	(67,100)
Mounting	Fixed tilt	Battery O&M and insurance	(41,800)
Measured yield	2,100 kWh/kWp · yr — 6,930 MWh gross	Year 1 EBITDA from the battery	562,400
Site curtailment	Metered at 47–50% through 2025, against a 65% national rate in 2026 to date	Year 1 yield on battery capex	33.5%
EPC and O&M	Lighthief Cyprus Ltd	Simple payback on the battery	3.0 years
Asking price	Released in the data room on execution of this NDA	The battery charges only from energy the grid has already refused. The fuel cost is zero by construction, which is why the yield on this increment is higher than on any new-build block in this pack.	
Expansion	A further 1.7 MWp is permitted on the adjoining plot — see Document 4		

Whole asset, year one, at the 2026 curtailment rate

Source	MWh/yr	€/MWh	Year 1
Gross generation, measured basis	6,930	—	—
Solar exported directly (35%)	2,426	127	€308,000
Recovered by battery and sold at night	3,836	175	€671,400
Gross energy revenue	6,262	156	€979,400
Aggregator and offtake fee, 10%			(€97,900)
Operating cost — PV €88,000, battery €41,800			(€129,800)
Year 1 EBITDA, whole asset, unlevered			€751,600

Yield on cost for the whole asset depends on the agreed price for the operating park, which is released in the data room. The battery increment above stands on its own and does not depend on that price.

Battery sensitivity to curtailment

Curtailment	Curtailed energy	Delivered to evening market	Year 1 EBITDA	Yield on battery capex	Payback
47% — site metered, 2025	3,257 MWh	2,774 MWh	€395,100	23.6%	4.2 yr
50%	3,465 MWh	2,951 MWh	€423,000	25.2%	4.0 yr
65% — 2026 national actual, base case	4,505 MWh	3,836 MWh	€562,400	33.5%	3.0 yr

Unlike the new-build blocks, the battery here has no solar revenue to lose, so its return rises directly with curtailment. The site's own metered rate of 47–50% is the conservative anchor; the national 2026 rate of 65% is the base case. We would expect diligence to settle on the site's own 2026 metered data, which we will provide.

Note on scale. At 3.3 MWp this park sits inside M2's 5 MWp envelope on its own, but combining it with Agios Theodoros would take the portfolio to 5.94 MWp, above the stated ceiling. If the ceiling is firm, the two are alternatives rather than a pair; if it is indicative, we would put the case for taking both.

Basis. Wholesale prices from published TSOC day-ahead market files, 1 Oct 2025 – 11 Feb 2026 (134 trading days, 6,432 half-hourly prints): daytime average €127/MWh, evening peak (17:00–21:00) average €183/MWh. This pack takes €175/MWh for evening capture, €8/MWh below the measured average. Curtailment base case of 65% is the published national rate for January–May 2026 (162 GWh curtailed); 2025 full year was 47.4% (306 GWh, CyprusGrid). Specific yield of 2,150 kWh/kWp · yr is the Lighthief design figure for fixed tilt 25° south with bifacial modules and white albedo; site-specific yield is confirmed by PVSyst before any commitment. Battery round-trip efficiency 87.8% AC–AC; effective capture of curtailed energy 85%, being daily-shape collection multiplied by round-trip efficiency. EPC rates €0.72/Wp (PV, turnkey) and €127,000/MWh (BESS, ex VAT) per the Lighthief EPC workbook v4, February 2026, and are indicative pending final specification and equipment pricing at the date of order. Revenues are stated after a 10% aggregator and offtake fee and before Cyprus corporate income tax, which rose from 12.5% to 15% on 1 January 2026. Figures are unlevered and exclude VAT. Merchant exposure to a day-ahead market with under two years of published price history is the single largest uncertainty in this case; no revenue is contracted.
