

SOLHASH.VERCEL.APP — MODEL REVIEW

Website Assumptions vs Internal Financial Model | Issues & Recommendations

Internal Note — Confidential — May 2026

3

Issues to fix (affect credibility)

1

Item to clarify (technical inconsistency)

7

Items confirmed correct

ISSUES — MUST FIX

ISSUE 1 Solar yield: 2,500 kWh/kWp is too high — change to 2,200

The website uses 2,500 kWh/kWp/year. This is only achievable with high-performance dual-axis tracking systems under ideal conditions. A more credible and defensible figure for Cyprus with single-axis trackers is 2,000–2,200 kWh/kWp. Fixed-tilt systems yield 1,700–1,800 kWh/kWp.

Metric	Website (2,500)	Recommended (2,200)	Impact
Annual MWh (5 MW)	12,500 MWh	11,000 MWh	-12%
Gross revenue (EUR 100K BTC)	EUR 2.32M	EUR 2.04M	-EUR 280K/yr
Mining IRR	38.3%	~30–32%	Still strong — more credible
Mining payback	2.10 yr	~2.4 yr	Still under 3 years
Park cents/kWh	4.90 c	~4.30 c	Vs EUR 0 alternative

ISSUE 2 Miner model outdated — update from S21+ to Antminer S21 Pro

The website references the S21+ (216 TH/s at EUR 2,040). The current bulk market price for S21 Pro (234 TH/s) is EUR 1,400–1,600. Updating this reduces capex, increases hashrate by 8%, and improves all downstream metrics. An investor doing due diligence will notice the outdated specification immediately.

Parameter	Website (S21+)	Recommended (S21 Pro)
Hashrate per unit	216 TH/s	234 TH/s (+8%)
Unit price	EUR 2,040	EUR 1,500 bulk (-26%)
Power draw	3.56 kW	3.51 kW (more efficient)
Capex 5 MW miners only	EUR 2,356K	EUR 1,755K

ISSUE 3 BTC sensitivity table missing from the website

The interactive calculator has BTC price buttons (EUR 60K / 100K / 150K / 200K) but no structured sensitivity table showing year-by-year profit and payback across scenarios. Every serious investor will immediately ask: what happens at EUR 60K? A visible sensitivity table pre-answers this and significantly increases credibility.

BTC Price	Park 5yr revenue	Mining IRR	Payback	Assessment
EUR 60K	EUR 1.06M	~1%	5.0 yr	Marginal — positive vs EUR 0

EUR 100K (Base)	EUR 2.15M	~31%	2.4 yr	Strong — recommended base case
EUR 150K	EUR 3.39M	~52%	1.6 yr	Excellent
EUR 200K	EUR 4.62M	~76%	1.2 yr	Exceptional — exceeds PPA

ITEM TO CLARIFY

CLARIFY

BESS — mandatory or optional? The website contradicts itself.

The website states in two places: 'Grid-forming BESS is not treated as mandatory in the baseline.'
However, the technical reality for fully off-grid farms (no grid connection at all) is that without a grid-forming BESS, string inverters have no voltage/frequency reference and will not start. The current wording will create confusion with technically knowledgeable investors and park owners.

Recommended wording: 'A compact grid-forming BESS is required for fully off-grid deployments to provide inverter voltage reference. For parks with partial or auxiliary grid access, a smaller UPS-grade buffer may suffice. BESS cost is included in all financial models.'

CONFIRMED CORRECT

Item	Website says	Status
JV split 30/70	Park 30% / Mining 70%	■ Confirmed
Cyprus tax — CIT	15% on mining profits	■ Confirmed
Cyprus tax — crypto disposal	8% on BTC to EUR gain	■ Confirmed
VAT on mining	0% (CJEU framing)	■ Confirmed
Stamp duty	0% (abolished 2026)	■ Confirmed
Mining pool	Braiins / Stratum V2 / FPPS	■ Confirmed
Connectivity	Starlink + 4G failover / Peplink	■ Confirmed

PRIORITY ACTION LIST

#	Action	Priority	Effort
1	Change yield from 2,500 to 2,200 kWh/kWp across all calculator outputs	■ Urgent	Low — parameter change
2	Update miner from S21+ to Antminer S21 Pro at EUR 1,500/unit	■ Urgent	Low — parameter change
3	Add BTC sensitivity table (EUR 60K / 80K / 100K / 150K) to Economics section	■ Urgent	Medium — new component
4	Rewrite BESS section to remove contradiction (mandatory for off-grid)	■ Important	Low — copy change
5	Add EU market expansion section (Italy, Spain, Greece, Macedonia)	Recommended	Medium

Actions 1–3 are parameter changes that take less than 1 hour to implement. They are the difference between a website that passes investor due diligence and one that raises immediate red flags. **These should be the first update pushed to**
