

CHRISTOFOROU ANDREAS C.

City of Manchester, Northwest, UK

Contact info: +447707499503, xristoforou.andreass@gmail.com, [linkedin.com/in/christoforoua/](https://www.linkedin.com/in/christoforoua/)

Profile

Proactive, versatile, and self-motivated individual with experience on multiple high-level energy sector projects obtained through different roles in multinational consulting and engineering organisations. Good presentation skills and effective communication at all levels, influenced by a growth mindset, and with purpose of making an impact through a holistic and balanced perspective. Combines a rich combination of transferable skills who can be very beneficial for the energy sector. The aim is to obtain a prestigious role in an organisation operating in the renewable energy generation sector and to take part in developing further its impact for the better future of the organisation and the people associated with it.

Professional Experience

Schneider Electric – Energy, Building, and Asset Management Consultant July 2023 – January 2026

Energy Assessments, Auditing, and Metering Strategy Development

- Lead energy assessor undertaking onsite energy audits for optimising energy performance for diverse facilities.
- Conducting site visits, data collection, energy modelling and analysis, identification of energy conservation measures, and development of energy efficiency recommendations to achieve higher energy performance.
- Developing power and energy metering strategies for facilities to monitor, manage, and optimise energy use.
- Facilities assessed include: Power station (Pulrose power station - Isle of Man), Factories (UK and EU), Hospitals, Airport, Commercial buildings, Warehouses, Retail stores, Hospitality venues, and Automobile service providers.
- Delivered over 30 audits and metering surveys to achieve higher energy efficiency, monitoring, and management.

Development of Energy Efficiency Specification Sheets – Client part of Global Top 100 Companies

- Project lead for developing Energy Efficiency (E.E.) specification sheets for seven power and electric technologies.
- E.E. specification sheets covered: Power Transformers, Three-Phase Motors, Variable Speed Drives, Power Factor Correction units, Uninterruptible Power Supplies, Power and Energy Metering, and Lighting Controls.
- Delivered E.E. specifications which were integrated within the client's project design, process operation and optimisation, procurement, and recycling phases for achieving high energy efficiency on this range of technologies.

Business Development, Developing Proposals and Business Cases

- Developing proposals and business cases to support front-end teams over project tendering and bidding processes.
- Developing new project opportunities by proactively strengthening the collaboration between the consultants, account managers, and clients through a tailored process that aims to link different parties for their common benefit.

ICF International, Inc. – Energy Analyst

April 2020 – June 2023

Energy Technology List (ETL) – Introduction of New Product Category

- Project lead for scoping the potential introduction of new technologies on the UK government's ETL programme.
- Conducting research, data modelling, presenting and hosting workshops, project organisation and coordination.
- Long-term stakeholder engagement with U.K. and E.U. associations, multinational manufacturing organisations, and the client. Developing strong relationships with stakeholders, a key aspect for the success of the project.
- Successful introduction of Professional Foodservice Equipment (PFSE) as a new product category in ETL, which led in the listing of 71 new PFSE on ETL as of November 2025: <https://etl.energysecurity.gov.uk/product-search>.

Partnering for Accelerated Climate Transitions (PACT) – Green Recovery Challenge Fund (GRCF)

- Leading the management and monitoring of three £500k funded projects, and being responsible for daily support.
- Primary contact between the UK PACT team and the consortiums of the [UK government funded projects in Africa](#).
- Relationship building and effective collaboration with the project managers and project partners for 17 months.

Education

Cardiff University – M.Sc Sustainable Energy and Environment 2018 - 2019

- Degree achieved with: Distinction.
- Modules include: Energy Studies, Energy Management, Environmental Fluid Mechanics, Condition Based Monitoring, Risk and Hazard Management in the Energy Sector, Fuel and Energy Systems.
- M.Sc. Thesis: The design and implementation of an autonomous unmanned surface vehicle able to perform obstacle avoidance and autonomous docking. The aim was achieved using PID controllers, the implementation of path planning algorithms, and simulations in the MATLAB Simulink (2018b) package. Project review [here](#).

Cardiff University – B.Eng Mechanical Engineering 2014 - 2018

- Degree achieved with: 2:1 Honors.
- Modules include: Dynamics, Thermodynamics, Heat Transfer, Thermo-Fluids, Solid Mechanics, Control and Instrumentation, Robotics, Fluid Mechanics, Fluid Power and Control.
- Year 3 project: Ammonia via Sonoluminescence. The project aim was to create the phenomenon of Sonoluminescence under laboratory conditions for the purpose of incorporating the phenomenon in the process of ammonia production as an alternative to the Haber-Bosch process. Project review [here](#).

Aston University – Engineering and Applied Science Foundation Course 2013 - 2014

- Course achieved with: Distinction.

Transferable skills

- **Innovative** – Inclined in bringing along new practices or approaches in adjusting those to new environments to overcome challenges and achieve high-level goals. Skill solidified over a challenging 9-month project in a newly formed team where ideal conditions led in sharing ideas and approaches with a successful rate of implementation.
- **Problem Solving** – Obtained through university studies and enhanced over a wide range of project work experience. Able to identify problems, provide solutions, and make decisions based on the desired outcome.
- **Planning and Organising** – Perceptive understanding around the aim and objectives of different in nature projects, able to view the big picture and plan while utilising the optimal combination of the available resources.
- **Self-Confidence** – Combined experiences including a military service, university studies and a series of different roles in multinational organisations have created the know-how in approaching different scenarios and situations with a positive approach and confident action taking to enable desired outcomes. Achieves via a learning mentality.

Additional Experience and Certifications

Military Service - Special Forces Regiment July 2011 - 2013

- Completed a two-year military service in the National Guard of Cyprus and volunteered to serve in the Special Forces Regiment.
- Member of the snipers' division with assigned duties of a sniper instructor in the snipers' school.

Certifications July - October 2022

- Microgrid Fundamentals – Basic Concepts, Value Proposition, Use Cases, and Microgrid Demand Creation.
- Completed the Fundamentals of Project Management and Exploring People Management courses.
- Operational Procedure 51 – Access to Substations.
- Industrial Digital Transformation – Computational Fluid Dynamics.

Interests

-
- Playing the Guitar, Swimming, Gymnastics, Tennis, Table tennis, and Book reading.
 - Passion for engineering, interest in STEM subjects, and a supporter of the transition towards a sustainable future.
